PHP Web Application Security

ON WEB APPLICATION SECURITY

Christian Wenz

@chwenz

Is PHP Insecure?

Too widespread

PHP is web server technology #1

Too easy

PHP seems to facilitate (some) mistakes

Defense in Depth

Multi-layered security

Expect each layer to eventually fail

Minimum Information Principle

Provide as little information as necessary

Prepare for discussions with UX

Open Web Application Security Project

https://www.owasp.org/

Guidelines

Tools

Events

Top 10

Summary

PHP is not insecure

PHP´s market position makes it a popular target

Defense in depth, minimum information principle

OWASP provides great guidelines
